Copy. 4322.?

Dear Mrs./Mr.,

In accordance with Notice (Dec.14/2000) to file missing parts of non provisional application filed under 37 CER 1.53(b) I've sent \$5.00 (check No1066) on Dec. 21/2000 to complete the basic filing fee and/or file a small entity statement claiming such status (37 CER 1,27) because none additional claims to application has been made.

Today (Feb. 13, 2001) I've called by Ph: (703) 308 - 1202 to Customer Service Center Initial Patent Examination Division. Some women (I did not ask her name) gave me information that my Pat. application No: 09/685,204 was sent to Group Art Unit 1731. I asked if everything OK with application after payment \$5.00 on Dec. 21/2000? Very nice women's voice gave me Phone : (703) 308-0469 and name of Patent Examiner John Hoffman. I immediately contacted with John Hoffman because he examines my application at the very beginning. However John did not find out record in computer system about my payment \$5.00 relate to complete the basic filing fee. Therefore something wrong either with complete processing operation or with record in system.

I'll be very appreciate if you provide an information how is going on with my patent application No: 09/685,204 filing date: 10/10/2000.

The copy of concealed check No: 1066 \$5.00 (copy from both sides) is appended.

The date of cancellation is 01/05/2001 No: 1226040530 PTO 13-10-001; 01-02-2001.

The Patent Application 09/685,204 Filing Date 10/10/2000 (inventor Vladimir Brik) is Continuation -in-Part (CIP) Control Number: 09/268,634 Art Unit: 1731.

NOTE: This patent application 09/685,204 is not subject to disclosure information (publication) until examination process will be accomplished and the Patent Number to application assigned. this old one

Sincerely:

Vladimir B. Brik /Inventor/.

Abstract:

Patent Plaques

The invention relates to a process for the manufacture of, in particular, continuous mineral fibers from rock, glass-containing technical wastes, technical glass wastes, and to an apparatus. The object of the invention is to create a process which enables the said group of starting materials to be processed from a stable melt to give, in particular, continuous fibers and thus to improve fiber quality and processability. The starting products are melted in a melting bath, transferred to a forehearth, a feeder device and then fed to a bushing device and from there taken off as thread, the melt being fed to the feeder device from a take-off area of the melt in which the melt has the parameters according to the invention of temperature, processing range, viscosity, quotient of viscosity and surface tension and energy of activation of viscous flow of the melt, and the ratio of height of the melt in the forehearth to the height of the melt in the melting bath being in a defined range.
